EMAIL SECURITY (DMARC)

TOTAL EMAIL PROTECTION

Ceo Fraud/Payment Fraud

Email continues to be a leading vector for malicious activity. Online CEO impersonations, employee phishing, & consumer scams account for billions of dollars in losses for government, private, & public organisations. Protecting email from fraud prevents lost revenue & decreased brand reputation.

WHAT IS DMARC?

DMARC (Domain-based Message Authentication Reporting & Conformance) is the first & only email authentication technology that can make the From address that users see in their email clients trustworthy.

DMARC ensures that legistimate email is properly authenticating against established DKIM & SPF standards, & that fraudulent activity spoofing domains under your company's control is blocked

DMARC eliminates email phishing by blocking unauthorized emails before they reach company employees, partners, & consumers. Simultaneously, DMARC facilitates higher corporate email deliverability because mail providers will easily distinguish between phishing message & valid marketing campaigns.

SSL Certificates

A digital certificate is an electronic "credit card" that establishes your credentials when doing business or other transactions on the Web. It is issued by a certification authority (CA). It contains your name, a serial number, expiration dates, a copy of the certificate holder's public key (used for encrypting messages and digital signatures), and the digital signature of the certificate-issuing authority so that a recipient can verify that the certificate is real.
